

Open+

The simple solution for complex insurance.

Not all insurance is created equal. If you write specialty, cede or assume reinsurance, or operate in the subscription or excess and surplus lines markets, you need a core processing solution built specifically to handle the unique challenges of complex risks.

With Open+ from Agencyport, you no longer have to resort to painful, costly reconfiguration of policy administration systems originally designed for high volume general insurance. Nor are you forced to start from scratch and build your own system. Open+ is a single-platform solution with over 40 years of data and workflow richness built in and ready to go to work for you.

A single solution.

Open+ is a comprehensive, enterprise-wide solution that features built-in underwriting, accounting, reinsurance and claims processing functionality, giving you the flexibility to process your business in a single platform, on one database, or select a la carte if you're looking to round out your environment. Open+ is globally proven to be a reliable single system for every facet of policy life cycle administration, for all major classes of business.

Track record.

Fifty-plus installations have taught Open+ a thing or two. Supporting numerous languages and currencies across commercial, specialty and personal lines of business, large and small carriers, using a centralized bureau or independent back offices, in primary insurance, ceded and assumed reinsurance, Open+ ships with more content and is supported by a more knowledgeable team than any other.

Next-generation.

Open+ is written in .NET and runs on SQL Server or Oracle. The system also features a well-developed service-oriented architecture (SOA) to easily integrate with your enterprise architecture: document management systems (we've got experience with the leading packages in many regions); data warehouse and BI packages; your e-mail servers, etc.

POLICY ADMINISTRATION IS JUST THE START

Looking for a web or mobile portal for agent or customer self-service? Need to better manage your delegated underwriting business with MGAs? Want a proven data conversion solution for your migration to Open+? How about XML integration with systems used every day by your agents and brokers? Agencyport offers products for all aspects of P&C transactions. Give us a call and let us show you how to make the complex business of insurance easier and smarter.

Highly configurable.

Open+ is the most flexible system on the market. Our configuration tool enables your team (or ours) to add, remove or change every screen; define which data fields appear and are mandatory; create and edit pick lists; and build rules for data validation and underwriting clearance and rating. Nobody touches source code—it's all done using familiar Microsoft tools. Beyond system administration? With Open+ Product Builder, you can configure new coverage products and refine changes to workflow. Open+ is with you today and in the future.

BUT DON'T TAKE OUR WORD FOR IT

We have very happy customers, and industry analysts like Gartner, Forrester, Celent, Novarica and others have been covering us for years. We would love to have you learn about us straight from the people who know us best. Call us. We can arrange a reference in your market.

Open+_US2011
